

AI Product Ops Intern -The take-home assignment

Primary filter. Budget 6-8 hours; we care about the result and how clearly you present it, not hours spent so better to submit as early as possible (<8 hrs after receiving)

Context

Composio turns apps into tools that AI agents can call. Before we build a toolkit for an app, we research it: what auth it uses, whether there is a self-serve path or it is partner-gated, what the API surface looks like, and whether it can be an MCP server or agent-callable skills. We do this across hundreds of apps. Doing it by hand does not scale. This assignment is a small, real version of that problem.

The task

You are given a list of 100 apps (below). For each, research and capture:

- **Category** and what it does in one line.
- **Auth method(s)**: OAuth2, API key, Basic, token, or other.
- **Self-serve vs gated**: can a developer get credentials themselves for free or on a trial, or does it need a paid plan, admin approval, or a partnership / contact-sales gate.
- **API surface**: documented public REST / GraphQL, roughly how broad, and any existing MCP.
- **Buildability verdict**: could this be an agent toolkit today, and the main blocker if not.
- **Evidence**: the docs URL / article behind each answer.
- and more..

Then, the actual point:

- **Find the patterns.** Do not just produce 100 rows. Cluster the results and tell us what patterns you see (which auth dominates, which categories are self-serve vs gated, the most common blocker, where the easy wins are versus what needs outreach). Insight over raw table.
- **Do it with an agent, ~~not by hand~~.** Build an agent (or script / pipeline) that does the research across the 100. Using Composio's own SDK and MCP to build it is in the spirit of the role. Tell us what it does and where it needed a human.
- **Verify your accuracy.** Sample the 100, cross-check your agent's answers against real docs by hand, and report where it was right and wrong. Show how you know the findings are trustworthy. Build real verification loops (agent, browser-use, and other means) plus human checks, and show at the end how it was verified, including how accuracy moved from a lower first pass to a higher one because of those loops. Accuracy is what matters most.

The deliverable: a single self-explanatory HTML page or slideshow

Everything above must be one HTML page / Case Study a reviewer understands in about two minutes with no narration. It must make clear on its own: the findings (clean skimmable table/matrix), the patterns (up top, plainly stated, the headline), the agent (what you built, where a human was needed), the proof (the app you built, live link or runnable trigger), and the verification (accuracy check on a sample, hits and misses shown honestly). Clarity and presentation are the point. Show both the final output and the process/workflow behind it, and make it easy for both an agent and a human to consume.

Constraints and honesty

- Use AI tooling freely (that is the job), but understand and be able to explain everything you submit; the interview will probe it.
- If the agent got things wrong or an app defeated you, say so on the page.
- You do not need paid accounts for apps. Where an app is gated behind payment or partnership, saying so with evidence is the correct finding, not a failure.

What to submit

- A live link to the deployed HTML page/ Case study.
- A link to the source repo with a short README on how to run the research agent.

The 100 apps (research set)

A real mix: apps customers have actually requested, and well-known apps. Across 10 categories and every common auth pattern on purpose, so the interesting part is the patterns across all 100.

1. CRM and Sales

#	App	Website / hint
1	Salesforce	salesforce.com
2	HubSpot	hubspot.com
3	Pipedrive	pipedrive.com
4	Attio	attio.com
5	Twenty	twenty.com (open-source CRM)
6	Podio	podio.com
7	Zoho CRM	zoho.com/crm
8	Close	close.com
9	Copper	copper.com
10	DealCloud	api.docs.dealcloud.com

2. Support and Helpdesk

#	App	Website / hint
11	Zendesk	zendesk.com
12	Intercom	intercom.com
13	Freshdesk	freshdesk.com
14	Front	front.com

#	App	Website / hint
15	Pylon	usepylon.com
16	LiveAgent	liveagent.com
17	Plain	plain.com
18	Help Scout	helpscout.com
19	Gorgias	gorgias.com
20	Gladly	gladly.com

3. Communications and Messaging

#	App	Website / hint
21	Slack	slack.com
22	Twilio	twilio.com
23	Zoho Cliq	zoho.com/cliq
24	Lark (Larksuite)	open.larksuite.com
25	Pumble	pumble.com
26	Discord	discord.com
27	Telegram	core.telegram.org
28	WhatsApp Business	developers.facebook.com/docs/whatsapp
29	Aircall	aircall.io
30	Vonage	developer.vonage.com

4. Marketing, Ads, Email and Social

#	App	Website / hint
31	Google Ads	developers.google.com/google-ads
32	Meta Ads	developers.facebook.com/docs/marketing-apis
33	LinkedIn Ads	learn.microsoft.com/linkedin/marketing
34	GoHighLevel	highlevel.stoplight.io
35	Mailchimp	mailchimp.com/developer
36	Klaviyo	developers.klaviyo.com

#	App	Website / hint
37	systeme.io	systeme.io (funnel builder)
38	Pinterest	developers.pinterest.com
39	Threads (Meta)	developers.facebook.com/docs/threads
40	SendGrid	sendgrid.com

5. Ecommerce

#	App	Website / hint
41	Shopify	shopify.dev
42	WooCommerce	woocommerce.com/document/woocommerce-rest-api
43	BigCommerce	developer.bigcommerce.com
44	Salesforce Commerce Cloud	developer.salesforce.com/docs/commerce
45	Magento (Adobe Commerce)	developer.adobe.com/commerce
46	Squarespace	developers.squarespace.com
47	Ecwid	api-docs.ecwid.com
48	Gumroad	gumroad.com/api
49	Amazon Selling Partner	developer-docs.amazon.com/sp-api
50	fanbasis	fanbasis.com

6. Data, SEO and Scraping

#	App	Website / hint
51	DataForSEO	docs.dataforseo.com
52	SE Ranking	seranking.com/api
53	Ahrefs	ahrefs.com/api
54	MrScraper	docs.mrscraper.com
55	Apify	docs.apify.com

#	App	Website / hint
56	Firecrawl	firecrawl.dev
57	Bright Data	brightdata.com
58	Sherlock	github.com/sherlock-project/sherlock
59	Waterfall.io	waterfall.io (contact/company intel)
60	Clay	clay.com

7. Developer, Infra and Data platforms

#	App	Website / hint
61	GitHub	docs.github.com/rest
62	Vercel	vercel.com/docs/rest-api
63	Netlify	docs.netlify.com/api
64	Cloudflare	developers.cloudflare.com/api
65	Supabase	supabase.com/docs
66	Neo4j	neo4j.com/docs/api
67	Snowflake	docs.snowflake.com
68	MongoDB Atlas	mongodb.com/docs/atlas/api
69	Datadog	docs.datadoghq.com/api
70	Sentry	docs.sentry.io/api

8. Productivity and Project Management

#	App	Website / hint
71	Notion	developers.notion.com
72	Airtable	airtable.com/developers
73	Linear	developers.linear.app
74	Jira	developer.atlassian.com
75	Asana	developers.asana.com
76	Monday.com	developer.monday.com
77	ClickUp	clickup.com/api

#	App	Website / hint
78	Coda	coda.io/developers
79	Smartsheet	smartsheet.com/developers
80	Harvest	harvestapp.com (help.getharvest.com/api-v2)

9. Finance and Fintech

#	App	Website / hint
81	Stripe	stripe.com/docs/api
82	Plaid	plaid.com/docs
83	Binance	binance-docs.github.io
84	Paygent Connect	paygent (NMI-powered)
85	iPayX	ipayx.ai/docs
86	QuickBooks	developer.intuit.com
87	Xero	developer.xero.com
88	Brex	developer.brex.com
89	Ramp	docs.ramp.com
90	PitchBook	pitchbook.com (research API)

10. AI, Research and Media-native

#	App	Website / hint
91	NotebookLM	cloud.google.com/gemini (Enterprise API)
92	Otter AI	help.otter.ai (MCP server)
93	Fathom	fathom.video
94	Consensus	consensus.app (OAuth requested)
95	Reducto	reducto.ai (document parsing)
96	Devin	docs.devin.ai (MCP)
97	higgsfield	higgsfield.ai/cli (content suite)
98	Mermaid CLI	github.com/mermaid-js/mermaid-cli
99	YouTube Transcript	transcriptapi.com

#	App	Website / hint
100	Grain	grain.com (meeting notes)
